Game Overview

Crashball is a **fantasy soccer** game with **swords**.

It's a **multiplayer third-person action soccer** game with punchy combat of a fighting game. Pick a samurai, a mage, or a gunner, and how you attack is how you pass, shoot, and tackle.

It's *Rocket League* x *Super Smash Bros*.

Why Crashball?

Soccer is popular, but most games have mostly top-down simulators.

Rocket League proved players want soccer as a **movement fantasy**. *Rematch* proved they want it as a **player fantasy**.

Nobody has done it as an **action-hero fantasy**. That leaves room for more movement and combat. You choose a class, grapple past a tackle, blast the keeper off the line, and strike down to score crazy goals.

Mechanics

Different attacks per character:

- **Sword:** light, combo, and jump attacks, each hitting the ball with a different power and arc.
- **Gun:** shoots mid-range projectiles that hit the ball and the player from a distance, but it's less effective at long range.
- **Wand:** manipulates the environment. Conjure walls to block enemies and to give your team new surfaces to grapple to and wall-run on.

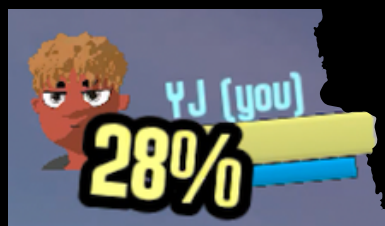

Block / Parry: stop shots, deflect strikes.

Ball riding: become the ball for full control. Costs stamina and makes you the most vulnerable.

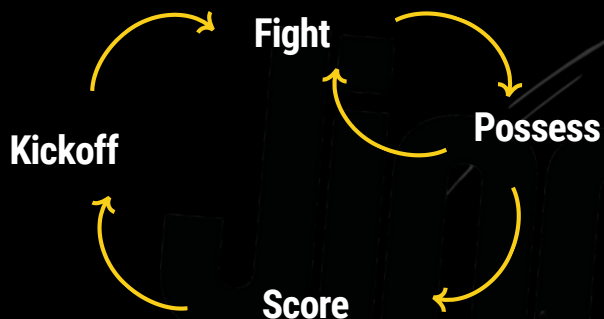

Movement: wall run for high balls and volleys, grapple to reach the ball fast.

Crashmeter: combat should never overshadow soccer, so there's no death. Taking damage fills your Crashmeter, and when it's full you get launched far from the play, so you are punished with distance rather than a game over.

Game Loop

Match structure: 2v2 or 3v3. The team with the most goals after 5 minutes wins. If it's tied, overtime runs until someone scores. Target length is 5 ~ 8 minutes.

Example

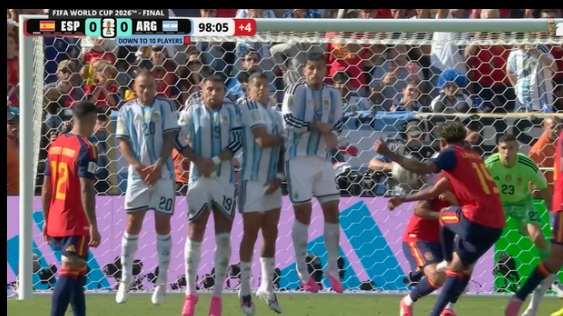

You hit the ball with your **sword**. The **enemy gunner** hits it back with their **shotgun** and you evade with a **grapple**. Your **ally mage** creates a **wall** away from the **gunner**. You **wall run** down it, then **ride** the ball. You bounce into the enemy goal and it's a **swordsman** keeper. You fake releasing the ball from the ride, then strike to hit the keeper, but the keeper **parries** you! You pass the ball back to your **mage** and 1v1 the **swordsman** intensely, just enough to open a gap, and with a little bit of room your teammate **scores**!!

Art Style (+ Audio)

Crashball's art is **toon-shading** like **Zelda** meets the stylish, sports-broadcast motion graphics of a **FIFA World Cup**. I want the characters and world to feel like Breath of the Wild or Pokémon but UI (replays, and goal celebrations) to feel like a real televised match.

X

Use **impact frame** and stylized vfx to exaggerate the 'feel'

The **audio** should be realistic yet exaggerated weapon sounds combined with a stadium-wide hyped crowd, pop-inspired music, and amplified announcer.

EXECUTION PLAN

TEAM 40

1 Director

4 Producers

- Lead Producer
- Design & Narrative Producer
- Engineering Producer
- Art Producer

7 Designers

- Lead Designer
- System Designer
- Arena(Level) Designer
- 3 Combat Designers (one per hero)
- UI Designer

7 Engineers

- Lead Engineer
- 2 Multiplayer Engineers
- LiveOps Engineer
- 3 Gameplay Engineers (combat, audio, UI)

8 Artists

- Lead Artist
- Concept Artist
- 3 3D Modelers
- 2 Animators
- Motion Graphics Artist

4 Audio

- Lead
- 2 Sound Designers
- Composer

2 Narrative

- Lead Writer
- Character Writer

4 Usability & QA

3 Marketing & Business

Summer 2026 (done): The swordsman class is complete, EOS P2P multiplayer with lag compensation is in, and there's a playable demo.

Pre-production (Fa'26 – Sp'27): Experiment with the gunner and mage classes, test new abilities and balance until the trinity actually holds up in a 3v3, and start rolling out marketing with the Steam page and daily playtest clips.

Fall 2027: Alpha, content complete with all three hero classes, and a public alpha test to stress the netcode and start pulling wishlists in from outside the team.

Spring 2028: Beta, polish, and a public beta test.

Expo (May 2028): Launch Season 1 with the three-character roster, free to play.

Live service: I want to keep the game growing by adding a new map and a new character every quarter, since the trinity and the single arena leave obvious room for both. Add Edgegap dedicated server hosting + matchmaking.

ABOUT ME

Hi! I'm YJ, a CS Games junior. I solo-developed *Dawngeon*, a pixel roguelike that hit **140K+** downloads and that I live-serviced through 3 major updates, directed *Overdawn*, an **award-winning** bullet-time bullet-hell shooter (GDWC, GWB, SAGE) with a **25+** person team, and engineered *Thang*, a multiplayer shooter in Unreal Engine. I really want to try directing a game again, this time multiplayer. Outside games, I loved soccer growing up but was physically untalented. Still, I loved the sports and social aspect of it, so I played a lot of hero shooters. Crashball is a mix of both.
